

## **Anti- Wrinkle Injections**

The following advice is to assist in reducing swelling, bruising, redness and bleeding. This will also optimise your aesthetic outcome.

### **Recommendations Following Treatment**

- ✓ Arnica cream or tablets can help to minimise bruising
- ✓ Aloe Vera cream can help hasten healing
- ✓ Mineral make-up is free of chemicals and can be safely applied
- ✓ Use the muscles that were injected eg. try to frown, squint or raise your eyebrows. You may feel a “mask-like” effect for up to three days
- ✓ Clean your face with a cleansing solution and gently rub with a cotton pad
- ✓ Spritz your face with a moisturising spray rather than rubbing in moisturiser

### **Avoid Following Treatment**

- × Laying down for the first few hours after treatment
- × Touching or massaging the treated area
- × Hot showers after treatment for a period of 24 hours
- × Hot drinks after treatment for a period of 8 hours
- × Vigorous exercise for a period of 24 hours
